

FOR IMMEDIATE RELEASE

RACE-KEEPER COMPARO SOFTWARE MAJOR SOFTWARE RELEASE ADDS VIDEO DATA CROPPING AND FILE EXPORT WITH CUSTOM GAUGE AND TRACK MAP OVERLAYS

STERLING, VA (October 1, 2009) – Trivinci Systems, LLC announced today a major software release with a set of customer-requested feature updates to Race-Keeper Comparo video data software, including tools for cropping video data track outings, gauge and track map overlays, and file export capabilities.

The software update, including all of the video editing capabilities, is available at no charge to customers and prospective customers.

Race-Keeper Comparo's major software release includes the following new features:

- Video data file cropping
 - Point and click video data file cropping that gives users the power to clip custom segments from video data outings and save as new outings, perfectly synchronized with accompanying data.
 - A driver can review his best lap from all of his laps driven at the track; an instructor can record different skill levels of laps and distribute the different skill laps to student at different levels of racing for targeted learning.
- File export
 - Point and click video data file export to file formats for uploading to popular video web sites (e.g., YouTube); support for different levels of quality and file sizes (low, medium, high)
 - Gauges and data elements (track map, lap time, lap number) displayed in large preview window for review prior to selection.
 - Video editing with graphical overlays empower instructors to remotely review and teach their students by reviewing video data exports.
- Gauges and track maps
 - Dozens of animated gauges from popular racing makes and models, along with generic dash elements for customer color matching and gauges for real-time performance analysis.
 - Drag and drop placement and positioning of gauges and data elements, including lap time, lap number, and track map.
 - Gauge library and simple GUI for easily adding or removing gauges from video overlay.

Because video and data are synchronized automatically as the recording is being made on the vehicle, the files that are produced are integrated video data files – not separate video OR data files. Therefore, there is no need for post-production synchronization tools or multiple data files. Also, because the interface is simple and intuitive, there is no need for a comprehensive Help section or production wizards.

The update process to the new version is simple – customers receive an update notification when they open Race-Keeper Comparo and then follow simple installation instructions. The software also is available for trial to prospective customers.

RACE-KEEPER COMPARO

Race-Keeper Comparo is a driving development PC application designed for racers and track day enthusiasts who use the software to analyze and improve their driving. Race-Keeper Comparo software plays synchronized video and data files captured by the Race-Keeper hardware system and includes video and data linked automatically to data graph and track map. The software delivers the power to compare laps side-by-side and to evaluate lap splits with the goal of enhancing driver lap times.

RACE-KEEPER

Race-Keeper's standard system includes: video data logger box, power loom, storage (2GB SD card), camera, microphone, GPS antenna, and Race-Keeper Comparo PC software. Additional options include additional cameras (up to a total of four), additional microphone (for stereo audio), remote operator control, CAN/OBDII interface, and driver input sensors (brake, throttle sensor)

Trivinci Systems is one of the world's most capable and trusted providers of video data loggers, delivering video data systems to premier racing series and programs for the past four years across North America and Europe. Trivinci has deployed Race-Keeper across more than 50 motor sports venues in North America and Europe. Race-Keeper is a registered trademark of Trivinci Systems, LLC.
